! Pentru a rezolva o ecuatie de gradul 2 procedam astfel:

- 1) Trecem totzi termeni in membrul stang
- 2) Descompunem in factori membrul stang
- 3) Egalam fiecare factor cu 0 si gasim radacinile

Formula de rezolvare a ecuatie de gradul 2

$$ax^2 + bx + c = 0$$

- 1) a, b, c coeficienti
- 2) calculeaza discriminantul  
 $\Delta=b^2-4ac$

$$3) Aflam x_1 = \frac{-b + \sqrt{\Delta}}{2a}$$

$$x_2 = \frac{-b - \sqrt{\Delta}}{2a}$$

$$2x^2 - 7x + 5 = 0$$

$$a=2 \quad b=-7 \quad c=5$$

Dependenta funcionala:

Se numeste dependenta funcionala intre 2 multimi nevide A,Bo corespondenta intre elementele lui A si elementele lui b care face ca la orice element din a sa-l corespunda un singur element in B.

A=domeniu de definitie

B=codomenu(multimea in care dependenta functionala ia valori)

Legea de corespondenta este al 3-lea element

## Probabilitatea

Problema: Un pachet de carti are 52 carti.

Aflati probabilitatea extragerii:

- a)unui 10
- b)unui nr. prim
- c)unui p.p.
- d)unui nr. par

a)Sunt 4 carti cu 10 => $p = \frac{4}{52} = \frac{1}{13}$

b)Nr prime sunt 2,3,5,7,13,11=>6x4=24  $p = \frac{4}{52} = \frac{1}{13}$

c)P.p sunt 1,4,9=>3x4 =12=> $p = \frac{12}{52} = \frac{3}{13}$

d)Nr. pare sunt 2,4,6,8,10,12,14 =>7x4=28  $p = \frac{28}{52} = \frac{7}{13}$

Probabilitatea= $\frac{nr.de - cazuri - favorable}{nr.de - cazuri - posibile}$

(Proprietatile egalitatii cu nr. reale)

- 1)  $a=a$  (reflexivitate)
- 2) Daca  $a=b \Rightarrow b=a$  (simetrie)
- 3) Daca  $a=b$  si  $b=c \Rightarrow a=c$  (transitivitate)
